

HEALTHCARE FACILITIES

Hospitals and Long Term Care facilities share a common requirement to keep equipment clean and infection free. Medical equipment such as wheelchairs, commodes, carts, over-bed tables, can be prime candidates to retain micro-organisms from patient, visitor or staff handling.

Due to staff shortages and available time, it is difficult if not impossible to keep equipment clean and infection free using manual methods. In addition, a manual method lacks a consistent process and is labor intensive. Today's healthcare facility must find ways to reduce costs. And, while costs must come down, the standards for cleaning and infection prevention are going up, not as a choice, but a requirement.

For costs to go down and standards to go up, a consistent dependable *HUBSCRUB* process is necessary. An automated process to minimize labor intensive work and at the same time provides the opportunity to re-direct labor to other tasks.

To take the risk out of equipment being a carrier of infections, *HUBSCRUB's* infection prevention application is a two step process. The first step is thorough cleaning. Many of the micro-organisms are removed by the detergent action in combination with the mechanical agitation of *HUBSCRUB's* rotating spray pressure system. Quality cleaning can only come from a spray system that covers all equipment surfaces regardless of their shape – sides, top, front, back and under. *HUBSCRUB's* rotating systems do just that with spray pressures between 40 to 50lbs. Pressure to clean.

The second step is disinfection. *HUBSCRUB's* rotating spray system provides the same thorough coverage to disinfect all equipment surfaces. Another benefit from *HUBSCRUB* is the use of multiple disinfectant technologies supporting extensive claims, very cost effective and significant water conservation.

Healthcare facilities struggling to keep equipment clean and infection free for each new patient, will find *HUBSCRUB's* productivity an important benefit. To meet fast turn-around times for new patients or that quick equipment cleaning need, *HUBSCRUB's* quick wash and rinse is less than 3 minutes.

Facilities having multiple floors will benefit by *HUBSCRUB's* designed-in mobility features. By moving *HUBSCRUB* to each floor the accessibility to equipment provides the opportunity of cleaning equipment more often while saving substantial transport time.
